A investigação fitoquímica dos extratos das folhas de Clinopodium tomentosum (Kunth) Govaerts (Lamiaceae) permitiu o isolamento de um novo composto, denominado ácido 2-O-benzoyl-3-O-cinnamoyl tartárico, juntamente com onze compostos conhecidos, dihidrodehydroconiferyl álcool 9′-O-β-D-glucopiranósido, blumenol c glucósido, syringaresinol 4′-O-β-D-glucopiranósido, hesperitina, pinocembrin 7-O-rutinosido, ácido clinopódico E, ácido cafféico, ácido p-cumárico, ácido cafféico metil éster, ácido cafféico etil éster, ácido rosmarynico e ácido rosmarynico metil éster. Suas estruturas foram elucidadas com base em métodos espectroscópicos e de espectrometria de massas.

Phytochemical investigation of the leaf extracts of Clinopodium tomentosum (Kunth) Govaerts (Lamiaceae) allowed the isolation of one new compound, named 2-O-benzoyl-3-O-cinnamoyl tartaric acid, along with twelve known compounds, dihydrodehydroconiferyl alcohol 9′-O-β-D-glucopyranoside, blumenol c glucose, syringaresinol 4′-O-β-D-glucopyranoside, hesperetin, pinocembrin 7-O-rutinoside, clonopodic acid E, cafféic acid, p-coumaric acid, cafféic acid methyl ester, cafféic acid ethyl ester, rosmarynic acid, and rosmarynic acid methyl ester. Their structural characterization was obtained on the basis of extensive spectroscopic analyses, including mono- and bidimensional nuclear magnetic resonance (1D and 2D NMR) experiments and high-resolution electrospray ionization mass spectrometry (HR-ESI-MS).

Keywords: Clinopodium tomentosum, Lamiaceae, phenolic compounds, spectroscopic analysis

Introduction

The genus Clinopodium (Lamiaceae) consists of flowering plants, widely distributed in southern and southeastern Europe, North America and Mexico.1 It is also found growing in Latin America between 3000 and 4000 m above sea level. Many species of the genus are used as medicinal plants. Clinopodium tomentosum (Kunth) Govaerts possesses small yellow-colored flowers, reaching a height of 30-80 cm, and in Ecuador is commonly known as “Santa Maria”. Local people use the aerial parts of the plant to prepare infusions for its relaxant effect and as anti-inflammatory agent. Previous phytochemical studies on Clinopodium ssp. have revealed the presence of flavonoid glycosides, phenylpropanoids, cafféic acid oligomers, and saponins.2-5 Despite its use in the Ecuadorian traditional medicine, to our knowledge, no data on the chemical composition or biological activity of the aerial parts of C. tomentosum are available. Nevertheless, its essential oil composition was reported by Benzo et al. in 2007.6

In this paper, we report the isolation and structural characterization by spectroscopic and spectrometric methods of one new compound, named 2-O-benzoyl-3-O-cinnamoyl tartaric acid (1) (Figure 1) along with twelve known compounds, from the aerial parts of the title plant.

Experimental

General experimental procedures

Optical rotations were measured on a Perkin-Elmer 241 polarimeter equipped with a sodium lamp (589 nm) and a 1-dm microcell. The nuclear magnetic resonance (NMR) experiments were carried out on a Bruker...
The dried and powdered aerial parts (560 g) of *C. tomentosum* were in sequence extracted for 48 h with *n*-hexane, CHC13, CHC13-MeOH (9:1) and MeOH, by exhaustive maceration (3 × 2 L), to give 7.6, 18.0, 8.5 and 13.1 g of the respective residues. The CHC13-MeOH extract (2.5 g) was subjected to Sephadex LH-20 (CC, 3 × 70 cm, flow rate 1.5 mL min⁻¹) eluting with MeOH to give six major fractions (A-F) grouped by TLC, together with pure caffeic acid (50 mg, 370-420 mL) and hesperitin (40 mg, 560-1000 mL). Fractions C (328 mg), D (904 mg), and E (157.8 mg) were separately purified by reversed phase (RP)-HPLC with MeOH-H2O (2:3) as eluent to afford blumenol c glucoside (5.3 mg, tR = 17 min) from C, syringaresinol 4'-O-β-d-glucopyranoside (8.6 mg, tR = 17 min) and dihydrohydroxyconiferyl alcohol 9'-O-β-d-glucopyranoside (10 mg, tR = 19 min) from D, and p-coumaric acid methyl ester (7 mg, tR = 24 min) and caffeic acid ethyl ester (7.7 mg, tR = 42 min) from E. The MeOH extract was partitioned between n-BuOH and H2O to afford an n-BuOH residue (6.2 g). The n-BuOH fraction (6.2 g) was submitted to Sephadex LH-20 (CC, 5 × 70 cm, flow rate 1.5 mL min⁻¹) using MeOH as eluent to obtain seven major fractions (A-G) grouped by TLC, together with pure caffeic acid (14.2 mg, 260-270 mL) and clinopodic acid E (62.4 mg, 550-590 mL). Fractions D (135.5 mg) and E (243 mg) were separated by RP-HPLC with MeOH-H2O (2:3) as eluent to give compound 1 (5.7 mg, tR = 22 min) from fraction D, and rosarinic acid methyl ester (20 mg, tR = 18 min) and rosarinic acid methyl ester (7 mg, tR = 41 min) from fraction E, respectively. Fraction C (443 mg) was previously submitted to partition between n-BuOH and H2O yielding a n-BuOH residue (67.8 mg) which was subsequently subjected to RP-HPLC with MeOH-H2O (1:1) as eluent to yield pinocembrin 7-rutinoside (2 mg, tR = 15 min). Fraction F (330 mg) was purified by RP-HPLC with MeOH-H2O (1:1) as eluent to give rosarinic acid (7 mg, tR = 9 min) and hesperetin (5 mg, tR = 24 min).

### 2-O-Benzoyl-3-O-cinnamoyl tartaric acid (1)

**Amorphous powder; [α]D25° = 70 (c 0.2, MeOH); UV (MeOH) λmax/nm (log ε) 213 (4.20), 225 (3.82), 309 sh (4.10); HR-ESI-MS m/z calcd. for C20H18O6Na [M+Na]+: 407.0743; found: 407.1691, 277.2327 [M+Na-130]+, 131.3031 [M+Na-130-146]+; ESI-MS m/z: 383 [M-H]; 1H NMR (600 MHz, CD3OD) and 13C NMR (150 MHz, CD3OD) data, see Table 1.**

### Plant material

Aerial parts of *C. tomentosum* were collected in Tumbaco, Ecuador in September 2011. The plant was identified at the Herbarium of Jardin Botanico de Quito, Quito, Ecuador. A voucher specimen (N. 7305 Clinopodium tomentosum/1) was deposited at Herbarium Horti Botanici Pisani, Pisa, Italy.
Results and Discussion

The chloroform-methanol and the methanol extracts of the aerial parts of C. tomentosum were subjected to Sephadex LH-20 column chromatography followed by reversed phase high performance liquid chromatography (RP-HPLC), to afford one new compound (1) (Figure 1) and twelve known compounds.

Compound 1 was isolated as amorphous solid. Its molecular formula was determined as C_{26}H_{36}O_{12} by HR-ESI-MS (m/z 407.1691 [M+Na]+). Its HR-ESI-MS/MS spectrum showed two main fragments at m/z 277.2327 [M+Na-130 (C_{10}H_{12}O)] (+ 95%) and 131.3031 [M+Na-130 (C_{6}H_{10}O)-146 (C_{6}H_{10}O)] (+ 28%) due to the loss of two asymmetric ester moieties. The 1H and 13C NMR spectra (Table 1) showed typical signals of a trans-double bond together with other five aromatic [δ_{H} 7.45 (overlapped, 3H, H-3'), 7.62 (overlapped, 1H, H-3'), 7.65 (overlapped, 2H, H-2'/6''), 8.17 (d, dd, 2H, J=7.5, 1.5 Hz, H-2'/6'')] and two hydroxymethine signals at δ_{H} 5.80 (d, 1H, J=2.7 Hz) and 5.82 (d, 1H, J=2.7 Hz). This information in conjunction with the remaining NMR signals and HR-ESI-MS/MS spectra indicated the presence of a tartaric acid esterified with one benzoyl and one cinnamoyl residues. All the 1H and 13C NMR signals were assigned with the aid of 2D NMR spectra including 1D-TOCSY, DQF-COSY, HSQC, and HMBC spectra. The downfield shift of H-2 and H-3 (δ 5.80 and 5.82) and C-2 and C-3 (both 76.0 ppm) compared to tartaric acid confirmed that these positions were esterified. The configuration of C-2 and C-3 remained undetermined. On the basis of all these evidences the structure of 1 was determined as 2-O-benzoyl-3-O-cinnamoyl tartaric acid.

Asymmetric esters of tartaric acid are found rarely in nature, being isolated mostly from Echinacea genus.7,8

The following known compounds were identified by spectral analysis and comparison with published spectroscopic data: hesperitin,9 dihydrodehydroconiferyl alcohol 9'-O-β-D-glucopyranoside,10 blumenol C glucoside,11 syringaresinol 4'-O-β-D-glucopiranoside,12 rosmarinic acid, rosmarinic acid methyl ester,13 pinocembrin 7-rutinoside,14 clonopidic acid E,15 caffeic acid, caffeic acid methyl ester,15 caffeic acid ethyl ester,16 and p-coumaric acid.17

Supplementary Information

Supplementary data (1H NMR, HSQC, HMBC, and MS for compound 1) are available free of charge at http://jbcs.sbq.org.br as PDF file.
