ABSTRACT

New synonymy in *Platyphora* Gistel (Coleoptera, Chrysomelidae, Chrysomelinae). *Doryphora cliens* Stål, 1858 is considered a synonym of *Doryphora congener* Stål, 1858.

Insecta

Taxonomy

The genus *Platyphora* Gistel, 1857 presents 452 species distributed from Mexico to Argentina and 182 species occur in Brazil (Blackwelder, 1946; Daccordi, 1994; Sekerka, 2016). The study of the type specimens of *Platyphora* allows us to propose a new synonymy in *P. congener* (Stål, 1858).

Abbreviations cited in the text are as follows: FIOC, Fundação Instituto Oswaldo Cruz, Rio de Janeiro, Brazil; MNHN, Muséum National d'Histoire Naturelle, Paris, France; MNRJ, Museu Nacional, Universidade Federal do Rio de Janeiro, Rio de Janeiro, Brazil; MZSP, Museu de Zoologia, Universidade de São Paulo, São Paulo, Brazil; NHRS, Naturhistoriska Riksmuseet, Stockholm, Sweden; ZSMC – Zoologische Staatssammlung des Bayerischen Staates, Munich, Germany.

***Platyphora congener* (Stål, 1858)**

(Figs. 1–3, 11–16)

Doryphora congener Stål, 1858: 470; Stål, 1862: 14; Weise, 1916: 14; Blackwelder, 1946: 669.

Chrysomela congener; Stål, 1862: 14.

Doryphorella (Histriionella) congener; Achard, 1922: 47; Bechyné, 1946: 88.

Stichotaenia congener; Bechyné, 1952: 47; 1954: 618.

Platyphora congener; Bechyné & Bechyné, 1965: 90; Sekerka, 2016 (cat. on – line without page)

Doryphora cliens: Stål, 1858: 471; Stål, 1862: 14; Weise, 1916: 14; Blackwelder, 1946: 669. **Syn. nov.**

Chrysomela cliens; Stål, 1862: 14.

Doryphorella (Histriionella) cliens; Achard, 1922: 47.

Stichotaenia cliens; Bechyné, 1952: 47; Zikán & Zikán, 1967: 132.

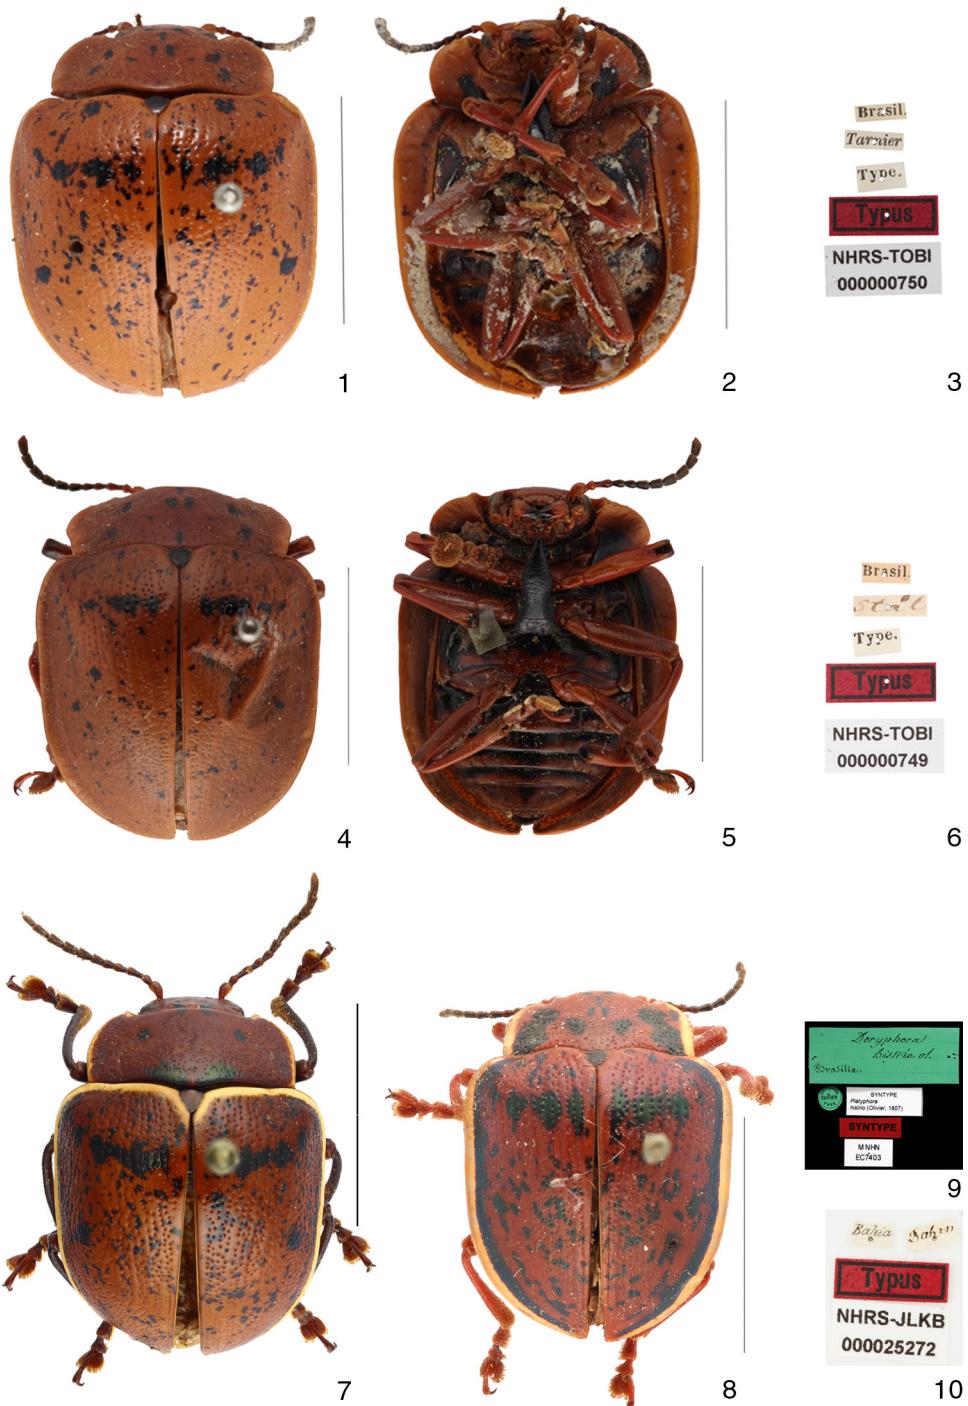

Platyphora cliens; Bechyné & Bechyné, 1965: 91; Sekerka, 2016 (cat. on – line without page).

The original descriptions of *Doryphora congener* and *Doryphora cliens* Stål, 1858 are very similar and only some differences were related to the color of the elytra and ventral region. The comparisons of the holotype photos of *D. congener* (Figs. 1, 2) and *D. cliens* (Figs. 4, 5), deposited in NHRS, and the comparative examination of 48 specimens helped us to observe that the differences between these species are only due to intraspecific variation (Figs. 1–6, 11–16). Also, the male genitalia of specimens from different localities (Espírito Santo, Rio de Janeiro and São Paulo) were dissected and no differences were observed. Therefore, *Doryphora cliens* is here considered a synonym of *Doryphora congener*.

Platyphora congener (Figs. 1–3, 11–16) is similar to *Platyphora histrio* (Olivier, 1807) (Figs. 7, 9) and *Platyphora circumflexa* (Stål, 1857) (Figs. 8, 10) and differs by projection of the mesosternal process well developed, enlarged and not curved and by the elytra with a narrow yellow stripe restricted to the outer margin. In *P. histrio* and *P. circumflexa* the projection of mesosternal process is shorter and curved. In *P. histrio* the lateral and anterior margins of elytra present a narrow yellow stripe. *P. circumflexa* presents two stripes on lateral margins of elytra, one external yellow and another internal, black.

Geographical distribution. Brazil (Espírito Santo, Minas Gerais, Rio de Janeiro, Santa Catarina, São Paulo).

Type material. We examined the holotype photos of *P. congregata* (Figs. 1–3) from Brazil, and *P. cliens* (Figs. 4–6) from Brazil and *P. circumflexa* (Figs. 8, 10) from Bahia, Brazil, taken by Dr Johannes Bergsten (NHRS) and the syntype of *Platyphora histrio* (Figs. 7, 9) from Brazil taken by Dr. Antoine Mantilleri (MNHN).

Examined material. BRAZIL: Minas Gerais: 1 female, 5.X.1958, Sherlock leg. (MZSP); Espírito Santo: Linhares, 1 specimen, XII.1964, B. Silva leg. (MNRJ); 1 specimen, X.1968 (MNRJ); 1 specimen,

XII.1968, B. Silva leg. (MNRJ); 2 specimens, IX.1970, B. Silva leg. (MNRJ); 1 specimen, X.1970, B. Silva leg. (MNRJ); 1 male, 1 specimen, III.1972, B. Silva leg. specimen, 8.II.1967, H. Reichardt leg. (MZSP); Amparo, 1 specimen (MNRJ); Santa Catarina: Corupá, 1 female (MNRJ); Timbó, 1 female, XI.1954, Dirings leg. (MZSP). **No data:** 4 specimens (MNRJ).

Conflicts of interest

The author declares no conflicts of interest.

Acknowledgements

We thank Dr Johannes Bergsten (NHRS) and Dr Antoine Mantielli (MNHN) for the photos of the types, Dr Miguel A. Monné (MNRJ) for his comments on this manuscript, and the project Informatização da Coleção Entomológica do Museu Nacional/UFRJ, SIBBR/CNPq proc. 405588/2015-1 for the use of photographic

equipment. The suggestions of two anonymous reviewers were very useful in improving the final version of the manuscript.
