

# ERRATUM

Vol. 88(2), apr./jun. 1993

p. 303 – Fig. 5

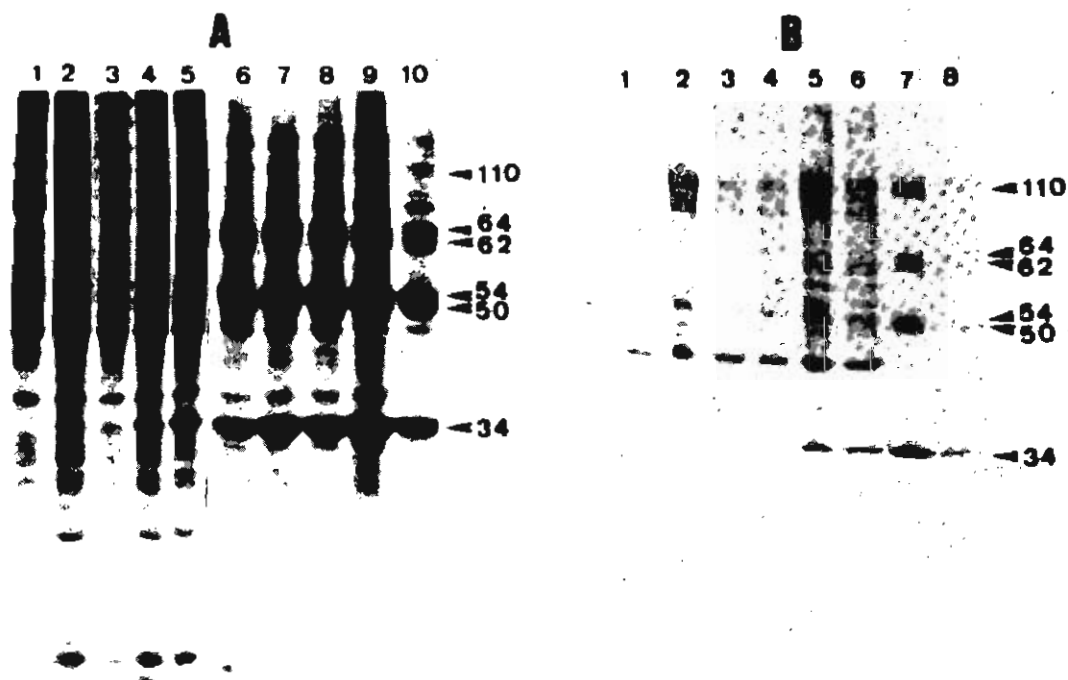

Fig. 5: time course of Mayaro virus protein synthesis. The cells were pulse-labelled for 1 hr with 30  $\mu$ Ci/ml of  $^{35}$ S-methionine at different times. The cells were lysed with sample buffer, SDS-polyacrylamide electrophoresis was performed, and dried gels were autoradiographed. A – *Aedes albopictus* cells: lane 1, mock infected cells; lane 2 to 10, respectively 1, 3, 5, 8, 12, 14, 30, 45 and 50 hr post-infection. B – BHK-21 cells; lane 1, mock infected cells; lane 2 to 8, respectively 1, 3, 6, 8, 10, 25 and 46 hr post-infection.
