

Reply to: The Epimed Monitor ICU Database[®]: a cloud-based national registry for adult intensive care unit patients in Brazil

Resposta para: Epimed Monitor ICU Database[®]: um registro nacional baseado na nuvem, para pacientes adultos internados em unidades de terapia intensiva do Brasil

We greatly appreciate the comments from Haniffa et al.⁽¹⁾ as well as we are grateful for sharing with the *Revista Brasileira de Terapia Intensiva* readers their experiences with the Sri-Lanka National Registry. They also describe several strengths and challenges in implementing national-level quality improvement initiatives in low-middle income countries. We concur with the authors that this represents a crucial and important step to improve care and efficiency in resource allocation and to foster international collaboration in research among these countries.
