I would like to congratulate the authors of the article entitled “Satisfaction of patients subjected to PresbyLASIK refractive surgery”(1) However, Wavelight Allegretto (400 Hz) excimer laser is not used for PresbyLASIK surgery, but for myopic refractive (corneal reshaping) correction through the monovision method. The term PresbyLASIK should be reserved for multifocal surgery, since it helps creating a multifocal corneal surface, unlike Wavelight Allegretto (400 Hz) laser.(2,3) Overall, our monovision experience with the WaveLight Allegretto Wave Eye-Q system was excellent and highly satisfying to patients.
